

MOHAMMED ZAID

Bhilai, Chhattisgarh, India | GitHub: mohammedzaid00100

PROFESSIONAL SUMMARY

AI-assisted full-stack developer experienced in building web applications, desktop tools, Android applications, productivity software, data-visualization tools, and software prototypes. Skilled in HTML, CSS, JavaScript, Git/GitHub, responsive development, debugging, deployment, rapid prototyping, and AI-assisted engineering workflows.

TECHNICAL SKILLS

Development: HTML, CSS, JavaScript, React, Node.js, responsive web development, web applications

Tools: Git, GitHub, VS Code, AI-assisted development, debugging, rapid prototyping

Applications: Electron desktop applications, Android/APK workflows, REST-style backend development

Deployment: Vercel, Netlify, GitHub-based deployment workflows

Product: UI/UX implementation, product ideation, troubleshooting, testing, documentation and iteration

PROJECTS

Web to EXE

Desktop application that simplifies converting static HTML/CSS/JavaScript projects into Windows executable applications.

Built around Electron and Node.js with ZIP-to-EXE packaging, build handling, debugging, and a public project website.

Aura Music

Music application with offline/download functionality and playlist management. Worked on Android APK packaging, downloaded-song organization, playlist features, branding, interface iteration, and crash debugging.

TimeDesk

Productivity and time-management web application built and deployed as part of my web-development portfolio.

Daily Routine Scheduler

Productivity application for creating, editing, and scheduling daily tasks. Built with a React/Vite frontend and Node.js/Express backend, with productivity tracking and scheduling functionality.

PlotGraphify

Web-based graphing and visualization project designed to turn data or mathematical inputs into clearer visual representations.

Railcast AI

Railway prediction and visualization system exploring modern web architecture and AI-driven forecasting concepts, including real-time data visualization and predictive workflows.

Collab Deal OS

Creator-brand collaboration platform prototype with creator and brand dashboards, opportunities, campaign creation, and an AI-advisor concept. Developed as a larger SaaS-style web application before being discontinued after technical issues.

Sofia FX Pro

Smart-money trading focused web project with a deployed public website, designed around presenting trading-related information through a polished web interface.

Personal Portfolio

Personal developer portfolio built to present projects, skills, and development work. Includes interactive project presentation, animations, expandable project cards, filtering/interface components, and responsive design.

Nalanda English Medium Higher Secondary School Website

School-focused website project created as part of my web-development work, covering information presentation and responsive website structure.

DEVELOPMENT APPROACH

I use AI as an engineering accelerator for research, implementation, debugging, testing, and iteration while maintaining control over product requirements and technical decisions. My workflow emphasizes rapidly turning ideas into working software, testing them in real use, identifying failures, and iterating toward a stronger product.

EDUCATION

Class 11 - Physics, Chemistry & Biology (PCB)

Nalanda English Medium Higher Secondary School, Chhattisgarh, India

CORE STRENGTHS

Rapid prototyping • Product development • Debugging • AI-assisted engineering • UI/UX implementation •
Git/GitHub • Deployment • Technical troubleshooting
